

Technical Memo No. 97

New Lifestyle™ Bifold Door – 615 System

Lifestyle Bifold Door – 615 System

Lidco's Lifestyle™ Bifold Door is designed around Centor's E2 range of hardware to ensure long lasting durability.

The system also uses Q-lon seals around the perimeter framing and in between sashes making it suitable for exposed weather locations. The Lifestyle™ Bifold Door allows up to six door leaves in both directions, which is limited to 160kg per end when all of the doors are fully opened.

Bifold doors are a great alternative to conventional balcony sliding doors as they allow maximum access while still maintaining uninterrupted views.

The system allows glazing from 6.38mm to 10.38mm single glazing and up to 22mm double glazed Insulating Glass Units.

We have listened to customer feedback pertaining to equal verses offset panels for our Lifestyle™ Bifold door and we are now pleased to advise that with the use of Centor's Half Offset Hinge Sets (12-233), equal panels are now achievable.

Revised Standard Detail drawings will be available to fabricators to enable them to take advantage of this new setout.
