

Technical Memo No. 98

Thermaview™ Sliding Window – 422 System Update

The Lidco Thermaview™ Sliding Window (422 system) will shortly be revamped, to bring it in line with the current AS2047 standards.

The system will no longer have a double slide option in the 65mm width framing. Testing shows that a double sliding window has inferior water penetration ratings than that of a traditional Fixed-Slide configuration.

The Thermaview™ Sliding Window with a fixed-slide configuration and a high performance sill threshold will enable it to achieve a far greater water rating.

We have recently finalised new Technical Manuals for the Thermaview™ and Pinnacle™ Sliding Windows (422 and 746 systems) to coincide with these changes. If you would like to receive one of these Technical Manuals please contact your Lidco representative.
